I am writing to apply for the Werkstudent Product Development position at Ginmon GmbH. Your work at the intersection of scientific wealth management and high-performance technology, particularly with the apeiron platform, is genuinely interesting. The opportunity to contribute to product strategy while working directly with the CTO aligns well with my background in full-stack development and product thinking.

Through my professional experience as a Web Developer at Explo-IT, I have spent over four years building and shipping scalable web applications using Laravel, Next.js, React, and TypeScript. In that role, I worked closely with business stakeholders to translate strategic goals into technical requirements, maintained product backlogs, and delivered features on schedule. This experience has given me a practical understanding of how product roadmaps connect to engineering execution.

One area that particularly interests me is the product development lifecycle itself. In previous work, I contributed to defining user stories, acceptance criteria, and feature prioritization in cross-functional teams. I also conducted performance monitoring of existing features and identified optimization opportunities for both backend performance and user experience. This matches directly with the responsibilities outlined for this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to Ginmon’s product development efforts.

Sincerely,

Md Shahanur Islam Shagor
