I am writing to apply for the 12 jobs that pay well without a degree position at Unigo. The concept of accessible, high-paying career paths without traditional degree requirements aligns with my own professional journey and technical background.

Through 4 years of full-stack web development experience, I have built scalable applications using Laravel, Next.js, React, and Node.js. My work includes designing RESTful APIs, implementing secure authentication systems, and optimizing database performance with MySQL and PostgreSQL. I focus on delivering clean, maintainable code that performs well in production.

In previous roles at Explo-IT and DataSoft LTD, I developed and deployed web applications end to end. I built responsive, SEO-friendly interfaces with Tailwind CSS and modern JavaScript frameworks, integrated payment gateways and third-party services, and managed deployments on Linux servers using Docker, Nginx, and CI/CD pipelines. I also implemented real-time features using WebSockets and Pusher.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background can contribute to Unigo’s goals.

Sincerely,

Md Shahanur Islam Shagor
