I am writing to apply for the Creative Strategist role at Ramen Bae. Your mission to build the next great ramen brand through a combination of product quality and performance-driven creative is something I find genuinely compelling. The way you have grown from a passion project to over 400,000 customers shows a team that understands both product and growth.

My background is in full-stack software engineering, where I have spent years building products from the ground up. This has trained me to think analytically about user behavior, performance data, and the feedback loops that drive growth. I am comfortable looking at metrics, understanding what is working and why, and using those insights to inform creative decisions. The same discipline that goes into optimizing a conversion funnel applies directly to developing ad concepts that resonate with specific audience segments.

What draws me to this role is the intersection of data and creativity. In my previous work, I have built systems that required deep understanding of user pain points, testing multiple approaches, and iterating based on real performance data. I am used to working in small, fast-moving teams where everyone is hands-on and accountable. I am comfortable writing scripts, reviewing edits, and jumping into execution when needed.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my analytical and creative approach can contribute to Ramen Bae’s growth.

Sincerely,

Md Shahanur Islam Shagor
