I am writing to apply for the Director Educational Partnerships role at Sonic Automotive. Sonic's commitment to developing future leaders through structured early-career pathways aligns with my own experience in building systems that connect education with practical industry outcomes.

Through my work as a software engineer, I have designed and developed platforms that required close collaboration with academic and technical stakeholders. One example is the AI Powered Financial App, where I built API infrastructure using Express, TypeScript, and OpenAI, integrating authentication systems and automated workflows. This project involved translating complex requirements into functional systems, a skill directly applicable to designing educational partnership strategies.

In previous professional roles, I have worked across teams to deliver scalable web applications, implement role-based access control, and optimize performance through database tuning and caching. These experiences have given me a strong foundation in data-driven execution and continuous improvement, both of which are essential for tracking pipeline volume, conversion rates, and program effectiveness.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to Sonic Automotive's talent pipeline strategy.

Sincerely,

Md Shahanur Islam Shagor
