I am writing to apply for the Compliance Market Surveillance Analyst position at Crypto.com. Your work in building a secure, compliant cryptocurrency platform that serves over 150 million customers is impressive, and I am interested in contributing to the Market Regulation team's mission of enforcing exchange rules and maintaining market integrity.

My background is in software engineering, with a focus on building real-time systems, secure architectures, and data-driven applications. While my experience is technical rather than financial, I bring strong analytical skills, a methodical approach to investigation, and hands-on experience with the kind of monitoring and security infrastructure that supports market surveillance operations.

Through my project work, I have built a real-time server health monitoring dashboard using React, Node.js, Socket.IO, and Docker that streams live system metrics and flags anomalies. This experience directly maps to the real-time market monitoring and anomaly detection responsibilities of this role. I also developed a privacy-preserving blockchain framework for autonomous vehicle networks using C++, Python, and post-quantum cryptography, which gave me practical experience with secure, decentralized systems and data integrity verification.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
