I am writing to apply for the Founding Designer role at neoBIM GmbH. The idea of collapsing the design-to-handoff pipeline and treating the running product as the source of truth aligns directly with how I prefer to work. I have been building interfaces in code for years, and I am drawn to the challenge of defining a design system for a 3D BIM platform from day one.

What stands out to me about neoBIM is the focus on AI-powered Building Information Modeling in the AEC space. The construction industry is ready for smarter, more collaborative tooling, and the opportunity to shape how professional 3D software looks and feels is exactly the kind of work I want to do.

I work primarily in HTML, CSS, and React, and I am comfortable prototyping directly in code. I have built responsive, accessible UIs using Tailwind CSS, Material UI, and Bootstrap, and I always design with light/dark mode and responsiveness from the start. I also use Figma for early exploration, but I prefer to move quickly into code where the real design system lives.

Through my professional experience as a Web Developer, I have owned the frontend of multiple full-stack applications built with Next.js, React, TypeScript, and Tailwind CSS. I am used to working closely with backend engineers, where handoff means a code review rather than a translation. I understand how to compose components, manage state, and build interfaces that are both visually consistent and technically maintainable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and portfolio for your review. I would welcome the chance to discuss how I can contribute to neoBIM’s design and product direction.

Sincerely,

Md Shahanur Islam Shagor
