I am writing to apply for the Senior Full Stack Developer (AI Solutions) role at Market Cloud. Your focus on building end-to-end AI applications and designing intuitive front-end interfaces aligns directly with the work I have been doing across full-stack development and AI integration.

Through hands-on project development, I have built production systems that combine modern front-end frameworks with AI-powered backends. I developed an AI-powered real estate platform using Next.js, Express, and MongoDB, integrating OpenAI and Replicate APIs for intelligent assistants and image processing. I also implemented role-based authentication, Stripe payments, and cron job scheduling. This experience has given me practical familiarity with architecting responsive UIs, designing RESTful APIs, and deploying AI features into real applications.

On the front-end side, I have worked extensively with JavaScript (ES6+), TypeScript, React, Next.js, Tailwind CSS, and Material UI to build dynamic, responsive interfaces. I have also used Angular JS in past projects and understand the migration path to modern Angular. My backend work includes Node.js, Express, Laravel, MySQL, PostgreSQL, and MongoDB, with deployment experience on AWS, Google Cloud, and Linux servers using Docker and Nginx.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can contribute to your AI development team and help build scalable, user-facing AI solutions. My CV is attached for your review. I look forward to the possibility of discussing how I can support Market Cloud’s goals.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
