I am writing to apply for the IT-Allrounder position at EuBiA. The combination of web development, database programming, and process automation in this role matches my technical background and working style. I appreciate that EuBiA focuses on creating meaningful impact through education and employment, and I would welcome the opportunity to contribute to that mission.

My professional experience spans full-stack web development, database application design, and workflow automation. I have built and maintained websites using Laravel, Next.js, React, and Tailwind CSS, and I have worked extensively with MySQL and PostgreSQL to structure and manage data. I also have hands-on experience with automation, having implemented systems that reduce repetitive tasks and improve operational efficiency.

In previous roles, I developed RESTful APIs, integrated authentication and payment systems, and deployed applications on Linux servers with Docker and Nginx. I have also worked on early-stage AI projects, including building AI-powered assistants and integrating machine learning APIs into production applications. This background allows me to contribute across the full stack while bringing practical automation and data management skills to the team.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would be glad to discuss how my skills can support EuBiA’s digital initiatives.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
