I am writing to apply for the Onboarding Specialist position at ezCater. While my background is primarily in software engineering, I bring a user-focused mindset and experience building systems that streamline complex workflows.

Through my professional experience as a Web Developer, I have designed and delivered full-stack applications that prioritize usability and efficiency. I have worked on platforms involving authentication, role-based access, real-time notifications, and payment integration, all of which require careful attention to user onboarding and experience.

One area that particularly interests me is how technology can simplify processes for people. In previous work, I built a multi-vendor e-commerce ecosystem that required coordinating between customers, sellers, and delivery agents. This involved creating clear onboarding flows and role-specific interfaces to ensure each user group could start using the platform with minimal friction.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background can contribute to ezCater’s onboarding team.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
