I am writing to apply for the Freelance Video Editor position at Forbes Advisor. Your focus on high-volume short-form social content for Meta, with an emphasis on hooks, retention, and platform-native pacing, caught my attention. I am particularly interested in how your team combines performance-oriented creative with iterative testing workflows.

My background is in software engineering and AI, but I have developed strong skills in AI-assisted creative workflows that directly apply to this role. Through my project work, I have integrated AI tools for image processing, video asset generation, and automation. I am comfortable working with ElevenLabs-style voice synthesis, Veo 3-style video generation, and other emerging AI creative tools. This experience allows me to quickly adapt to new technologies and experiment with workflows that can enhance your short-form content production.

In previous work, I built systems that required real-time data processing, API integration, and automated content generation. These projects taught me how to work iteratively, test creative variations, and refine outputs based on performance feedback. I understand the importance of consistency, responsiveness, and creative judgment in a social-first environment where content is regularly tested and optimized.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I am available to discuss how my skills can support your creative strategy team.

Sincerely,

Md Shahanur Islam Shagor
