I am writing to apply for the Shopware Entwickler Fullstack position at Aurivian GmbH. Your focus on building and optimizing eCommerce solutions for mid-market merchants in the DACH region aligns well with my experience in full-stack PHP development and custom web application delivery.

My professional experience centers on PHP-based backend development with Laravel, REST API integration, and database design using MySQL. I have worked with modern development setups including Docker, Git, and CI/CD workflows, and I am comfortable contributing to architecture decisions and internal development standards. While I do not have direct Shopware experience, my background in object-oriented PHP and Symfony-adjacent frameworks provides a solid foundation for quickly ramping up on Shopware 6 plugin development and customization.

In my previous role at Explo-IT, I developed and maintained scalable web applications using Laravel and Next.js. I built RESTful APIs, implemented authentication and role-based access control, and optimized database performance through query tuning and caching. I also worked on storefront-level features using HTML, CSS, and JavaScript, and deployed applications on Linux servers with Nginx and Docker. One relevant project I delivered is a multi-vendor e-commerce ecosystem built with Laravel and Flutter, which involved API design, role-based access, payment integration, and real-time notifications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to Aurivian’s development team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
