I am writing to apply for the Platform & Infrastructure Engineer position at Aurivian GmbH. The opportunity to build and shape your infrastructure from the ground up, especially in an e-commerce context, is exactly the kind of challenge I am looking for.

My experience centers on Linux server administration, containerization with Docker, and building CI/CD pipelines. In my recent role as a Web Developer, I was responsible for deploying and maintaining web applications on Linux servers using Nginx and Apache, managing Docker containers, and setting up CI/CD workflows for streamlined deployments. I also worked with AWS for cloud hosting and infrastructure management.

One area that particularly interests me is the greenfield nature of this role. I have experience configuring and optimizing hosting environments, monitoring system health, and implementing security measures such as access controls and secure configurations. I am comfortable taking ownership of infrastructure tasks and working closely with development teams to align architecture decisions with business needs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Aurivian’s infrastructure growth.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
