I am writing to apply for the Head of Banking Operations role at DoorDash USA. The Dasher Financial team's mission to build fintech products that serve gig workers is exactly the kind of practical, user-focused problem I want to work on.

Through my professional experience, I have built full-stack financial platforms from the ground up. I developed an AI-powered financial application using Express, TypeScript, MongoDB, and AWS services, handling authentication via OTP, Google, and Facebook, and integrating document generation and email delivery through AWS SES. This required designing secure, scalable systems for real-world financial workflows.

One area that particularly interests me is running money movement operations at scale. In my work on the Smart Finance platform, I built a modular personal finance system with transaction management, budgeting, savings tracking, and real-time updates using Server-Sent Events. The platform was deployed with Docker and included role-based admin controls and production-grade security. This experience directly applies to managing operational rails like ACH and OCT, and driving cost-per-transaction efficiency.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building financial systems can contribute to DoorDash's Crimson operations.

Sincerely,

Md Shahanur Islam Shagor
