I am writing to apply for the Territory Business Development Manager USMC position at Shield AI. Your work on autonomous systems like V-BAT and Hivemind, designed to protect service members and civilians, is directly relevant to the kind of intelligent, real-world technology I have been building and researching.

My technical foundation is in full-stack development and AI engineering, but my recent focus has been on autonomous systems and secure UAV communication. I have designed and prototyped a wireless vision-aid system using YOLOv8n for real-time object detection on edge devices, and developed a privacy-preserving blockchain framework for autonomous vehicle networks using Zero-Knowledge Proofs and post-quantum cryptography. These projects required translating complex operational needs into practical, deployable systems.

What stands out to me about this role is the emphasis on owning the full sales cycle and building trusted relationships with USMC stakeholders. In my previous work, I have coordinated with engineering teams, managed project timelines, and communicated technical capabilities to non-technical partners. I am comfortable operating in high-ownership environments where converting operational challenges into funded outcomes is the primary measure of success.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in autonomous systems and technical project execution can contribute to Shield AI’s USMC growth objectives.

Sincerely,

Md Shahanur Islam Shagor
