I am writing to apply for the Senior Director Global Delivery Services position at Elite Technology. Your platform's focus on unifying financial, invoice, time, and data management into a single cloud-native SaaS system for law firms is impressive, and I am interested in contributing to customer delivery operations across EMEA and APAC.

My professional experience includes building and deploying scalable web applications using Laravel, Next.js, and Node.js, with a strong emphasis on API development, authentication, and database optimization. I have worked with MySQL, PostgreSQL, and Redis to ensure reliable data handling, and I have deployed applications on AWS and Docker with CI/CD pipelines. This technical foundation supports the kind of consistent execution and operational excellence your role requires.

In previous work, I have been responsible for delivering features end to end, from backend architecture to responsive frontend interfaces. I have integrated payment gateways, implemented role-based access control, and built real-time communication features using WebSockets. These experiences have taught me how to align technical delivery with customer needs and business metrics.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in software delivery and system architecture can support Elite's global delivery operations.

Sincerely,

Md Shahanur Islam Shagor
