I am writing to apply for the Data Analyst position at Stio. Your approach to building a data-driven culture that values practical analysis over theoretical models resonates with how I work. I appreciate that Stio is looking for someone who connects data to real business decisions, and I would welcome the opportunity to contribute to your team.

My technical foundation includes Python, SQL, and Git/GitHub, which I use daily in my development work. I have experience working with databases such as MySQL and PostgreSQL, writing queries, and building data pipelines. I am comfortable with version control, cloud infrastructure (AWS, Google Cloud), and containerization tools like Docker. I also have practical experience with AI-assisted development and understand how to review AI-generated code for semantic correctness.

Through my professional experience as a Web Developer, I have partnered directly with stakeholders across product, marketing, and operations to translate ambiguous questions into well-defined analyses and features. I have owned projects end-to-end, from scoping and building to validating and communicating findings. I am comfortable presenting results to both technical and non-technical audiences.

One area that particularly interests me is the emphasis on data governance and documentation that is actually useful. In my previous work, I have written documentation that both humans and automated systems can rely on, and I understand the importance of maintaining clear metric definitions and business semantics.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I have attached my CV for your review and look forward to the possibility of contributing to Stio’s data and analytics function.

Sincerely,

Md Shahanur Islam Shagor
