I am writing to apply for the Builder Chief role at Consultran. Your mission to transition from legacy systems to modern web-based tools while keeping thousands of trucks compliant every day is exactly the kind of hands-on, impact-driven work I look for.

Your stack includes Laravel, Express/React, and PostgreSQL, which matches the technologies I use daily. Over the past four years, I have built and shipped production-grade full-stack applications using Laravel for backend services, React and Next.js for frontend interfaces, and PostgreSQL for structured data. I have also deployed applications on DigitalOcean and managed Linux servers with Nginx and Docker, so I am comfortable owning the full delivery pipeline.

One area that particularly interests me is your approach to using AI agents for development while maintaining code quality through review and testing. In my own work, I have built systems that integrate third-party APIs, handle real-time data, and include role-based access control. I am used to validating output, refactoring where needed, and ensuring that what ships is maintainable and solves the actual business problem.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can help Consultran build and ship the right systems for your team.

Sincerely,

Md Shahanur Islam Shagor
