I am writing to apply for the General Production position at Dana Incorporated. While the job description is currently being finalized, I understand that production roles require reliability, attention to detail, and the ability to maintain consistent operational workflows.

My professional experience includes building and maintaining production-grade web applications using Laravel, Next.js, and Node.js. I have deployed and managed applications on Linux servers with Nginx, Apache, and Docker, and I have set up CI/CD pipelines to ensure smooth and reliable releases. I am comfortable working in environments where uptime, monitoring, and process adherence are critical.

In previous work, I have been responsible for optimizing application performance, managing database queries, and implementing caching strategies to keep systems running efficiently under load. I have also worked with real-time monitoring tools and logging systems to quickly identify and resolve issues before they impact operations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in production systems and software engineering can contribute to Dana Incorporated.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
