I am writing to apply for the CAN_GENERAL PRODUCTION position at Dana Incorporated. With a background in software engineering and hands-on experience building and maintaining production systems, I am confident in my ability to contribute to your team.

My professional experience includes developing scalable web applications and backend systems using Laravel, Next.js, Node.js, and Python. I have worked extensively with Linux servers, Docker, Nginx, and CI/CD pipelines to deploy and maintain reliable production environments. I am comfortable managing databases, optimizing queries, and ensuring system stability under load.

One area that particularly interests me is building tools that improve production workflows. I developed a real-time server health monitoring dashboard that tracks system availability, latency, and performance metrics using Socket.IO and React. This project required careful attention to reliability, real-time data streaming, and deployment on Dockerized infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to Dana Incorporated.

Sincerely,

Md Shahanur Islam Shagor
