I am writing to apply for the Support Engineer role at Level. Your approach to building a modern RMM platform that simplifies endpoint management for MSPs is something I find genuinely interesting. The idea of owning the full customer relationship from onboarding through independence and building automations that ship to every user aligns with how I prefer to work.

I have strong Linux administration skills and have deployed and maintained production applications using Nginx, Apache, and Docker. I am comfortable diagnosing whether an issue originates from the platform or the customer environment, and I can write up findings with enough detail for engineering to reproduce and fix. I also use AI tools like Claude and ChatGPT regularly and know when to trust the output versus when to dig deeper.

In my previous work as a Web Developer, I handled bug tracking, feature QA, and direct communication with stakeholders. I wrote documentation, supported deployments, and resolved issues across the stack. I am comfortable running live troubleshooting sessions and explaining technical workflows to non-technical audiences.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to Level’s support team.

Sincerely,

Md Shahanur Islam Shagor
