I am writing to apply for the Implementation Specialist role at Dossier. Your focus on solving competency management inefficiencies for health systems and hospitals is a meaningful problem, and I am interested in contributing to your growing team.

Through my professional experience as a Web Developer, I have managed full-cycle software implementation projects, from initial client onboarding and requirements gathering to system configuration, testing, and go-live delivery. I am comfortable taking ownership of project timelines, coordinating across teams, and ensuring that each deployment meets both technical specifications and customer expectations.

One area that aligns well with this role is my experience creating and maintaining comprehensive project documentation, including status reports, user guides, and transition plans. I have also trained end-users on platform workflows and best practices, helping teams adopt new systems with confidence. I approach each implementation with a focus on clarity, structure, and measurable outcomes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can support Dossier’s implementation team.

Sincerely,

Md Shahanur Islam Shagor
