I am writing to apply for the Web- & KI-Umsetzer:in role at plehn media. The combination of web development, AI-assisted prototyping, and conversion-focused design makes this position a strong match for my experience and working style.

My background is in full-stack web development with React, Next.js, Tailwind CSS, and Laravel, complemented by practical use of Python for scripting, automation, and API integrations. I regularly use AI tools like ChatGPT to accelerate development, generate content, and build small internal tools. This aligns directly with your need for someone who can build landing pages, optimize product pages, and implement AI-supported workflows.

In previous professional work as a Web Developer, I built and maintained scalable web applications, integrated RESTful APIs, implemented role-based authentication, and optimized database performance. I also created responsive, SEO-friendly UIs and deployed applications on Linux servers using Docker and Nginx. I am comfortable working across the full stack and taking ownership of features from concept to deployment.

One area that particularly interests me is the blend of design and conversion. I have experience evaluating UI layouts, improving user flows, and building interfaces that drive measurable results. I also have hands-on experience with Figma for design collaboration and Git for clean version control.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to plehn media’s projects.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
