I am writing to apply for the Loxone Programmierer / Gebˆ́udeautomatisierer position at Enerdies Energieberatung. Your work on intelligent energy management systems for hotels is a compelling application of automation technology, and I am keen to contribute to your team.

Through my academic background in software engineering and hands-on project work, I have developed a solid foundation in building automated systems that integrate hardware and software. My experience includes developing a real-time server health monitoring dashboard that streams live metrics using Socket.IO, and an AI-powered financial application that automates workflows through API integration and cloud services. These projects required structured problem-solving, system integration, and independent technical decision-making.

One area that particularly interests me is the integration of diverse technical components into a unified automated system. In my project work, I have connected sensors, cloud APIs, and real-time data pipelines to create responsive and reliable systems. This experience directly translates to programming and configuring automation servers, integrating energy components like photovoltaic systems and heat pumps, and optimizing system performance through testing and iteration.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my technical skills and enthusiasm for automation to Enerdies Energieberatung. I have attached my CV for your review and look forward to discussing how I can contribute to your projects.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
