I am writing to apply for the Chief Operating Officer position at Rose, Klein & Marias. While my professional background is in software engineering and technology operations, I bring a structured approach to managing infrastructure, optimizing workflows, and leading technical teams that aligns with the operational leadership this role requires.

Through my experience as a Web Developer, I have overseen the full lifecycle of web application delivery, from architecture design to deployment and monitoring. I have managed Linux servers, configured Nginx and Apache, set up Docker containers, and implemented CI/CD pipelines for reliable releases. I have also worked with monitoring tools like Prometheus and Grafana to maintain system health and performance.

A relevant example is the Real-Time Server Health Monitoring project I built, where I designed a full-stack dashboard using Node.js, Socket.IO, and Docker to track system metrics in real time. This project required coordinating between frontend and backend components, managing data flow, and ensuring the system remained responsive under load. It reflects the kind of cross-functional, operations-focused thinking that a COO role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my operational and technical background can contribute to the continued success of Rose, Klein & Marias.

Sincerely,

Md Shahanur Islam Shagor
