I am writing to express my interest in the Senior Technical Project Manager, LatAm role at Distribusion Technologies. Your platform connects ground transportation operators with global retailers like Google and Booking.com, and I find the challenge of scaling API-driven B2B marketplace infrastructure across 70+ countries genuinely compelling.

Through my professional experience as a Web Developer, I have spent over 4 years delivering full-stack applications and managing complex API integrations. I regularly navigate technical topics such as RESTful API design, architecture diagrams, authentication flows, and database optimization. Even when I am not writing code, I am confident translating technical complexity into clear, actionable plans for both engineering teams and non-technical stakeholders.

One area that directly aligns with this role is my experience leading cross-functional delivery of e-commerce and API-heavy projects. At Explo-IT, I built and integrated RESTful APIs, implemented role-based access control and secure payment gateways, and delivered real-time features using WebSockets. I also developed blueprint processes for standard product rollouts, ensuring consistency across deployments. This required close collaboration with product, engineering, and operations teams to capture market needs and align technical delivery with business goals.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background in technical project delivery and API integrations can support Distribusion’s growth in Latin America.

Sincerely,

Md Shahanur Islam Shagor
