I am writing to apply for the Chief of Staff role at Malama Health. Your mission to redesign maternal care for underserved communities is both urgent and meaningful. What stands out to me is how Malama combines deep human presence with rigorous, data-driven outcomes. That blend of empathy and operational discipline is rare, and it is exactly the kind of environment where I do my best work.

My professional background is in software engineering and systems design, but my day-to-day work has always been about operations. I have built and maintained full-stack applications, managed end-to-end project delivery, coordinated with cross-functional teams, and owned the processes that keep products running reliably in production. I am comfortable moving between high-level strategy and granular execution, and I know how to build systems that scale without creating unnecessary complexity.

One area where I can contribute immediately is in building repeatable operational playbooks. In my previous work, I designed deployment pipelines, documented workflows, and created reusable architectures that made each subsequent project faster and more efficient. I see a direct parallel to the market activation and credentialing work Malama needs. I enjoy the challenge of taking a complex, multi-step process and turning it into something predictable and scalable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my operational mindset and systems-building experience can support Malama’s growth during this pivotal stage.

Sincerely,

Md Shahanur Islam Shagor
