I am writing to apply for the Senior ML Engineer role at Clutch. Your focus on building production ML systems and AI agents that directly improve credit union member experiences is exactly the kind of applied AI work I want to be part of.

Through research and development work, I have more than one year of applied AI and machine learning experience, including building systems that integrate computer vision, natural language processing, and real-time data pipelines. I am comfortable working in Python for model training and evaluation, and I use TypeScript regularly for API and tool contract integration. I have hands-on experience with Docker, AWS, and GitHub-based workflows, which matches your production infrastructure requirements.

A relevant example is the AI Powered Financial App, where I designed and built the backend using Express, TypeScript, OpenAI, and AWS. I implemented AI assistants trained on custom datasets, integrated voice-to-text via AWS Transcribe, and automated PDF term sheet generation and email delivery through AWS SES. The system handled authentication via OTP, Google, and Facebook, and managed real-time data from Google Sheets. This project required the same kind of tool-design discipline, structured error handling, and low-latency API thinking that you emphasize for your NBA engine and agent tool contracts.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Clutch’s production AI systems.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
