I am writing to apply for the Chief Executive Officer position at Magdalena Biosciences. Your mission to develop plant-derived, pharmaceutical-grade medicines for mental health disorders is ambitious and meaningful. I am drawn to the challenge of leading a seed-stage venture through pipeline development and Series A financing.

My background is in software engineering and AI systems, where I have built complex platforms from the ground up in lean, resource-constrained settings. I have experience designing scalable architectures, integrating AI capabilities, and delivering production-ready applications that serve real users. This requires the same strategic clarity, prioritization, and disciplined execution that early-stage biotech demands.

In my professional experience as a Web Developer at Explo-IT, I delivered full-stack applications using Laravel, Next.js, and cloud infrastructure. I built RESTful APIs, implemented authentication and role-based access control, optimized database performance, and deployed systems on Linux servers with Docker and CI/CD pipelines. I also led the development of an AI-powered financial application that integrated OpenAI, AWS services, and real-time data processing.

One area that particularly interests me is the intersection of technology and healthcare. I have designed systems that handle sensitive data, require secure communication protocols, and must operate reliably under real-world conditions. These are the same principles that apply to building a validated clinical pipeline and managing vendor relationships in a biotech context.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
