I am writing to apply for the Werkstudent*in position in Informatik / WI-Informatik at Gastro-Beratung.de. Supporting gastronomy businesses with digital transformation through POS systems, QR-code menus, and ordering solutions is a practical challenge that combines technical knowledge with real customer interaction. I find this combination genuinely interesting.

Through my software engineering studies and hands-on project work, I have developed a strong technical foundation that aligns well with the onboarding and support responsibilities of this role. I have worked extensively with web technologies, databases, and API integrations, which gives me the ability to understand how digital systems like reservation tools and ordering platforms function under the hood. This technical understanding is essential when setting up systems for clients and troubleshooting issues on-site.

In previous professional experience as a Web Developer, I was responsible for deploying applications, creating user documentation, and supporting end-users during system transitions. I learned to communicate technical information clearly to non-technical stakeholders and to approach problems with a structured, solution-oriented mindset. These skills translate directly to training restaurant teams and creating user-friendly guides and FAQs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
