I am writing to introduce myself as a Full-Stack & AI Engineer interested in contributing to Tippingpoints GmbH. While you may not have a specific role open at the moment, I wanted to share my background and approach to engineering work.

My professional experience spans full-stack web development using Laravel, Next.js, React, Node.js, and TypeScript. I have built and deployed production applications that include RESTful APIs, authentication systems, payment gateways, real-time features, and role-based access control. I also work with Docker, Linux servers, and cloud platforms for deployment and infrastructure.

Beyond web development, I have hands-on experience with AI-powered systems, computer vision, and secure communication protocols. One project I developed is a real-time assistive system using YOLOv8-based object detection that runs entirely offline on edge hardware. Another project involved building a privacy-preserving blockchain framework for autonomous vehicle networks using Zero-Knowledge Proofs and post-quantum cryptography.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am based in Voronezh, Russia, and available for remote work or relocation to Bonn. I have attached my CV and would welcome the opportunity to discuss how my skills and working style could align with your team’s needs.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
