I am writing to apply for the IT-Projektmanager position at Software-Schmiede Vogler & Hauke GmbH. Your focus on delivering real ERP solutions for Mittelstand companies, with direct communication between development and leadership, matches the kind of project environment where I work best.

My professional experience combines full-stack development with project delivery responsibilities. Over the past four years, I have led technical workstreams in web application projects, from initial requirement gathering through deployment and go-live. This has given me practical understanding of how to structure specifications, align development work with business needs, and keep projects on track regarding time and quality.

One area that directly relates to this role is my experience managing end-to-end delivery of multi-module platforms. For example, I built a multi-vendor e-commerce ecosystem with a Laravel backend and Flutter frontends, coordinating between customer, seller, and logistics modules. This required analyzing processes, defining clear specifications, and maintaining close alignment with stakeholders throughout the project lifecycle.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my project management and technical background can contribute to your team at Software-Schmiede Vogler & Hauke GmbH.

Sincerely,

Md Shahanur Islam Shagor
