I am writing to apply for the Senior Data Analyst (Community & Product Forensics) role at Atolls. Your focus on community-driven shopping and data integrity at scale aligns with my interest in building systems that turn raw data into actionable insights.

Through my work as a software engineer, I have developed strong analytical skills and technical literacy across web and app technologies. I am comfortable inspecting network payloads, debugging event triggers, and understanding how tracking pixels and API responses work. This background allows me to investigate data discrepancies effectively and identify root causes when metrics look off.

I have practical experience with Python for data manipulation and modeling. In one project, I built an AI-powered financial application that involved processing user data, integrating with OpenAI APIs, and automating workflows. I also work regularly with SQL and have optimized queries in MySQL and PostgreSQL for performance. While I have not used ClickHouse specifically, I understand columnar storage concepts and am confident I can adapt quickly.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to Atolls' community data team.

Sincerely,

Md Shahanur Islam Shagor
