I am writing to apply for the Senior Data Analyst (Community & Product Forensics) role at Atolls. As a full-stack and AI engineer with experience building data-driven applications and real-time monitoring systems, I am drawn to the challenge of uncovering insights from high-volume event data and ensuring data integrity at scale. Atolls' mission to help millions make smarter spending decisions through community intelligence aligns with my interest in building systems that turn raw data into actionable understanding.

Through hands-on project development, I have built a real-time server health monitoring dashboard that tracks availability, latency, and system metrics across multiple targets. This system uses Node.js and Express for the backend, Socket.IO for live data streaming, and Python with psutil for collecting system metrics. I wrote optimized SQL queries for SQLite and designed the architecture to handle concurrent data streams. This experience directly maps to the technical investigation and deep-dive analytics responsibilities described in the role.

One area that particularly interests me is data hygiene and forensic analysis. In my work on the Wireless Vision-Aid for the Blind project, I built a real-time object detection pipeline using YOLOv8n and Python, processing video frames locally with ultra-low latency. This required debugging data flows, handling noisy input from the camera module, and building robust logic to filter out false positives. I am comfortable inspecting network payloads, debugging event triggers, and tracing data discrepancies back to their root cause.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in data analysis, Python, and web/app technologies can contribute to the Community Data Team at Atolls.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
