I am writing to apply for the Software Developer (m/w/d) Virtualization & Hypervisor Architecture position at INDIE Solutions GmbH. The focus on developing high-security virtualization platforms and system-level software for cyber security applications is directly relevant to my technical background and research interests.

My experience in systems-level software development includes working with Linux, Docker, and embedded systems using C++ and Python. Through my research on secure UAV communication protocols and decentralized systems, I have developed a strong understanding of low-level debugging, root-cause analysis, and performance optimization in complex environments. These skills are directly applicable to the development of hypervisor and kernel-near software components.

One area that particularly interests me is the emphasis on security-by-design and systems security. In my OmniGuard V2X project, I designed a privacy-preserving blockchain framework for autonomous vehicle networks, which involved implementing cryptographic primitives, conducting performance analysis, and ensuring data integrity under adversarial conditions. This work required the same kind of low-level system thinking and attention to security that this role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in systems software and security can contribute to INDIE Solutions GmbH.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
