I am writing to apply for the Solution Architect (m/f/d) position at Shopware AG. Shopware's focus on building flexible, scalable, and future-ready digital commerce experiences for ambitious brands is something I find genuinely compelling. The opportunity to design end-to-end ecommerce architectures and guide implementations from pre-sales through launch aligns directly with my experience.

Through my professional experience as a Web Developer, I have designed and built scalable ecommerce platforms from the ground up. One relevant example is a multi-vendor ecommerce management ecosystem I developed using Laravel, MySQL, and REST APIs, which integrated role-based access control, payment gateways, and real-time notifications. This project required me to evaluate architectural trade-offs, define data flows, and ensure the system could scale across web and mobile interfaces.

In previous work, I collaborated closely with stakeholders to translate business requirements into technical architectures. I have experience designing solutions involving payments, authentication, CMS-like content management, and third-party integrations. I am comfortable communicating technical concepts to both technical and non-technical audiences and supporting partner teams during implementation to reduce technical risk.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in ecommerce architecture and full-stack development can contribute to Shopware's success.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
