I am writing to apply for the Talent & Recruiting Intern position at your mobility start-up. What stands out to me is the combination of a high-growth environment, a product with exceptional customer satisfaction, and the opportunity to work directly with the Head of People & Strategy. This role offers real ownership in building a team that is shaping a new category in vehicle inspection.

Although my professional background is in software engineering, I have developed strong organizational discipline, clear communication habits, and a practical approach to working with people. In my experience as a Web Developer, I regularly coordinated between stakeholders, managed timelines, and ensured nothing fell through the cracks. These skills translate directly into sourcing, screening, and managing a recruiting funnel with precision and reliability.

One area that particularly interests me is the emphasis on understanding people beyond their resumes. I have always been someone who reads situations and people quickly, both in team settings and client interactions. I am comfortable making cold outreach, conducting initial conversations, and identifying who delivers versus who only talks well.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am available for at least five months and would welcome the chance to contribute to your team’s growth. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
