I am writing to apply for the SAP HCM/SuccessFactors Consultant position at Recruit 121 Group. While my professional experience is rooted in full-stack development and AI engineering rather than SAP-specific modules, I bring strong technical foundations in software architecture, database systems, and enterprise integration that are directly applicable to this consulting role.

Through my work as a Web Developer, I have built and maintained scalable web applications using Laravel, Next.js, and Node.js. I have designed RESTful APIs, implemented role-based access control, and optimized database queries in MySQL and PostgreSQL. These skills translate well to understanding complex enterprise systems like SAP HCM, where data integrity, system integration, and performance are critical.

One area that particularly interests me is the challenge of integrating diverse systems and ensuring smooth data flow between modules. In previous projects, I have worked with authentication systems, payment gateways, and third-party API integrations, which required careful attention to data consistency and security. I approach system integration with the same discipline required for SAP implementations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my software engineering discipline, problem-solving approach, and adaptability to your consulting projects. I have attached my CV for your review and would welcome the opportunity to discuss how my background could contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
