I am writing to apply for the VC Associate position at Toyota Research Institute, specifically for the Toyota Ventures Frontier Fund. Your firm's focus on deep tech, AI, automation, robotics, and space tech aligns closely with my technical background and my interest in identifying and supporting early-stage breakthrough technologies.

Through my work as a software engineer and AI engineering enthusiast, I have built production systems across AI, automation, and robotics. I developed an AI-powered financial application using OpenAI, AWS, and MongoDB, and an AI-based real estate platform integrating Replicate API for image processing and Stripe for payments. These projects gave me direct experience with the technical challenges and business potential that early-stage deep tech companies face.

One area that particularly interests me is autonomous systems and robotics. I designed a Wireless Vision-Aid for the Blind (WVAB), a real-time assistive system using YOLOv8n object detection on a Raspberry Pi and ESP32-CAM, with ultra-low latency UDP streaming and multilingual audio feedback. This project required evaluating trade-offs between cost, performance, and real-world usabilityâ skills directly applicable to assessing early-stage hardware and AI startups.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
