I am writing to apply for the Senior Kotlin Backend Engineer position at Flix. The role's focus on building reliable, data-correct backend systems for finance technology aligns with my experience in designing scalable services and owning features end-to-end.

My backend engineering background includes working with Kotlin, Node.js, Express.js, and building RESTful APIs with authentication, role-based access control, and database optimization. I have practical experience with AWS, Docker, and Linux for deployment and monitoring, and I am comfortable working with both relational databases like MySQL and PostgreSQL as well as NoSQL systems like MongoDB.

In previous work, I owned features from technical design through implementation, testing, deployment, and ongoing maintenance. I collaborated closely with product owners and stakeholders to translate business requirements into robust technical solutions, ensuring data accuracy and system reliability. I have also worked on event-driven features using WebSockets and Socket.IO for real-time data processing.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my backend engineering skills can contribute to Flix's finance technology stream.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
