I am writing to apply for the Data Platform Engineer (Mid-Level) position at Flix. Your work in building scalable data infrastructure to support mobility services like network planning and pricing is impressive, and I am interested in contributing to a platform that processes millions of daily events.

My experience includes working with AWS, Kubernetes, Docker, and CI/CD pipelines, which directly supports the design and maintenance of scalable data infrastructure. I have deployed applications on AWS EC2, managed containerized environments with Docker and Kubernetes, and set up monitoring using Prometheus and Grafana. These skills align with the responsibilities of building reliable data systems and ensuring platform performance.

Through my professional experience, I have owned features end-to-end, from development and testing to deployment and monitoring. I have also implemented Infrastructure as Code practices and automated deployment workflows. This background prepares me to contribute to the reliability and automation of your data platform.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills can support the FlixTech data platform team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
