I am writing to apply for the Senior HR Operations Manager position at Flix. What stands out to me about FlixTrain is the combination of sustainable mobility and a pragmatic, action-oriented culture where people build systems instead of just reacting to problems. That approach matches how I work.

My background is in software engineering and AI, with a focus on building automated systems that reduce manual effort and improve operational reliability. Over the past four years, I have developed full-stack applications, real-time monitoring dashboards, and AI-powered tools that streamline complex workflows. I am comfortable identifying inefficiencies, designing scalable solutions, and implementing them end to end.

One area that particularly interests me is process automation using AI tools. I have built systems that integrate OpenAI and Replicate APIs for intelligent task processing, automated reporting pipelines with Cron job scheduling, and real-time data dashboards using Socket.IO and Grafana. These experiences align directly with your goal of using KI-Tools to optimize HR processes and reduce manual workloads.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my automation and process optimization experience can contribute to Flix’s People Team.

Sincerely,

Md Shahanur Islam Shagor
