I am writing to apply for the Senior Manager People Operations role at Flix. What draws me to this opportunity is the chance to apply my technical and process-oriented mindset to a domain where operational excellence directly impacts people and business outcomes.

My background is in software engineering and AI, where I have spent years designing systems that are efficient, scalable, and automated. I have practical experience using AI tools and workflow automation to identify inefficiencies, build dashboards, and create reporting structures that support data-driven decisions. This aligns directly with the process optimization and digitalization responsibilities outlined in the role.

In previous work, I have built systems that reduced manual effort through automation, improved data quality, and enabled real-time monitoring. I approach problems with a builder's mindset: I document processes, design scalable solutions, and focus on long-term improvement rather than quick fixes. I am comfortable working under tight deadlines and collaborating across teams to ensure smooth operations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills in process automation and operational design can contribute to the People Operations team at Flix.

Sincerely,

Md Shahanur Islam Shagor
