I am writing to apply for the Founding Product Manager position at CoCrafter (YC W24). Your mission to build the operating system for subcontractor management in the construction industry is exactly the kind of ambitious, real-world problem I want to work on. The opportunity to join a Y Combinator-backed startup at this early stage and shape a product that addresses inefficiencies in a traditional industry is compelling.

My background combines strong technical understanding with hands-on product delivery. As a Full-Stack & AI Engineer, I have built and shipped complete features end-to-end, from initial concept and customer discovery through design, development, and deployment. I am used to working directly with users, understanding their pain points, and translating those insights into practical solutions that engineering teams can execute.

In previous roles, I have owned product streams independently, managed project timelines, and coordinated across teams to deliver complex features. I have experience with authentication systems, payment integrations, real-time features, and scalable API design. This technical foundation allows me to communicate effectively with engineers while keeping the customer's needs at the center of every decision.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my product thinking, technical skills, and startup mindset to CoCrafter. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
