I am writing to apply for the Junior AI Engineer Anwendungen & Daten position at Kivvo. Building a data-sovereign business AI for the German Mittelstand is a meaningful challenge, and I want to contribute to making it a reality.

Through hands-on project development, I have built AI-powered applications that combine Python, LLM APIs, and data processing. For example, I developed an AI-powered financial application where I integrated OpenAI's latest models, trained AI assistants on custom datasets, and built data pipelines that process voice messages via AWS Transcribe and generate PDF term sheets automatically. This required working with real data flows, not just prototypes.

I have also worked on an AI-powered real estate platform where I integrated the Replicate API for image processing and built multiple AI assistants using GPT models. These projects gave me practical experience with LLM APIs, data preparation, and building features that rely on retrieval and contextual understanding. I am comfortable experimenting with RAG concepts and vector-based retrieval systems.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can build real products, take ownership, and learn from a small team. Kivvo sounds like that place. I have attached my CV and look forward to the opportunity to discuss how I can contribute.

Sincerely,

Md Shahanur Islam Shagor
