I am writing to apply for the Junior Python Developer Kl & Retrieval position at Kivvo. Your focus on building a truly data-sovereign business AI for German SMEs, hosted in Germany with privacy embedded in the architecture, is exactly the kind of practical, high-impact AI work I want to be part of.

Through hands-on project development, I have built AI-powered applications that go beyond prototypes. I developed the backend for an AI-powered financial app using Express, TypeScript, and OpenAI, where I created AI assistants trained on custom datasets, implemented voice-to-text processing via AWS Transcribe, and built secure authentication with OTP, Google, and Facebook login. I also built an AI-powered real estate platform that integrated OpenAI assistants with Replicate AI for image processing, role-based access, subscription plans, and Stripe payments. These projects gave me practical experience with LLM APIs, data processing, and building features that users actually interact with.

I am comfortable working with Python, processing and preparing data for AI workflows, and experimenting with LLMs and retrieval concepts. My internship at Global IT involved building Python and Django applications, optimizing PostgreSQL databases, and debugging production systems. I approach problems pragmatically, whether writing custom code or integrating existing tools, and I am used to working independently on new topics.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to building Kivvo.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
