I am writing to apply for the Entwicklungsingenieur position at WSK Elektronik GmbH, part of Edelmut Media GmbH. The description of a role where one person owns the full development cycle from concept and schematic through LabVIEW code to commissioning matches exactly the kind of engineering work I find most meaningful.

Through my research and project work, I have built systems that combine embedded hardware, real-time software, and sensor integration. One project that directly relates to this role is the Wireless Vision-Aid for the Blind (WVAB), where I developed a complete system using a Raspberry Pi, ESP32-CAM, and YOLOv8n for real-time object detection. I handled the full pipeline: hardware selection, UDP-based low-latency streaming, C++ and Python programming for inference, and multilingual audio feedback. This required working with bus-level communication, testing in a lab environment, and documenting the technical architecture.

I am comfortable with the technical mix this role demands. I have programmed in C++ and Python for embedded applications, worked with Ethernet TCP/IP communication, and developed systems that require both hardware understanding and clean software implementation. I approach projects with the mindset of building something that works reliably from the first prototype through to deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in system-level development could contribute to the projects at WSK Elektronik.

Sincerely,

Md Shahanur Islam Shagor
