I am writing to apply for the Senior Full Stack Developer Laravel & Vue.js position at ZEP GmbH. Your work building the next product generation for over 3,000 Mittelstand companies, combined with your focus on AI-native development, stands out to me. I appreciate the emphasis on combining solid engineering with AI-driven workflows rather than treating AI as a separate feature.

My professional background is rooted in full-stack development with Laravel and modern JavaScript frameworks. Over the past several years, I have built and maintained production web applications where Laravel served as the backbone for backend logic, API design, and database management. I have worked extensively with MySQL, Eloquent query optimization, and caching strategies to ensure performance at scale. On the frontend side, I am comfortable with TypeScript, React, and Next.js, and I have experience building responsive, component-driven interfaces that prioritize user experience.

One area that particularly interests me is your plan to build AI products and agentic workflows directly into the platform. I have integrated OpenAI and Replicate APIs into full-stack applications, building AI assistants trained on custom datasets and handling image processing pipelines. I understand the difference between AI as a prototype and AI as a production architecture, and I approach both with the same engineering discipline.

In my previous role, I was responsible for architecting features from data model to deployment, including role-based access control, real-time notifications via WebSockets, and third-party integrations like payment gateways and cloud storage. I also participated in code reviews, maintained coding standards, and worked closely with designers and product managers to align technical decisions with business goals. I am comfortable working in agile setups and contributing to strategic discussions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to ZEP’s next generation of products.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
