I am writing to apply for the Senior Product Manager role at Otark GmbH. Your mission to build the operating system for renewable energy procurement and trading is ambitious and timely, and I find the intersection of energy markets, platform design, and automation genuinely compelling.

My background is in full-stack software engineering and product delivery. Over the past four years, I have designed, built, and shipped production platforms from concept to deployment. I have worked directly with stakeholders to translate market and user needs into clear technical requirements, and I have owned features end-to-end, from validation through to launch. I am comfortable working autonomously and making decisions based on user impact rather than feature volume.

One area where I can contribute immediately is in bridging the gap between domain complexity and software execution. I have experience building platforms that handle multi-role workflows, real-time data, and third-party integrations. I also actively use AI tools to prototype ideas, validate assumptions, and accelerate development cycles. I understand how to structure requirements so that engineering teams can move fast without ambiguity.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my product and engineering experience could support Otark’s platform vision.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
