I am writing to apply for the SAP Retail Consultancy position at Recruit 121 Group. Your firm's focus on guiding medium-sized retail and wholesale companies through complex SAP transformations, including S/4HANA migrations and greenfield implementations, aligns with my interest in building robust, end-to-end systems that solve real business problems.

While my professional experience is rooted in software engineering rather than SAP consulting, I bring a strong systems-thinking approach and hands-on experience with full-stack development, database design, and integration work. In my previous roles, I have designed and built scalable web applications using Laravel, Next.js, and MySQL, and I have implemented authentication systems, role-based access control, and third-party service integrations. This technical foundation gives me the ability to quickly understand complex enterprise systems and contribute to analysis, configuration, and integration tasks.

One area that particularly interests me is the opportunity to work on end-to-end process design and customer-facing consulting. In my work as a web developer, I have collaborated directly with stakeholders to gather requirements, propose solutions, and deliver features that meet business needs. I am comfortable communicating with both technical and non-technical audiences, and I enjoy the problem-solving aspect of translating business challenges into practical system designs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background could contribute to your team's continued growth.

Sincerely,

Md Shahanur Islam Shagor
