I am writing to apply for the Cloud Security Expert (m/w/d) - specialised in Purview position at NVISO. Your mission to protect European society from cyber attacks through proactive security services is exactly the kind of impactful work I want to contribute to.

My cybersecurity experience centers on building secure, privacy-preserving systems for distributed and autonomous environments. Through research and development work, I have focused on data integrity, encryption, and resilience against cyber threats. I have worked with cryptographic primitives including SHA3-256 hashing, secure key exchange, and authentication mechanisms to protect sensitive data in transit and at rest.

One area that directly relates to this role is my work on OmniGuard V2X, a privacy-preserving blockchain framework for autonomous vehicle networks. In this project, I designed a decentralized security layer that ensures data integrity, anonymity, and resistance to post-quantum threats. The system uses cryptographic chaining and Zero-Knowledge Proofs to validate inter-vehicle communication without exposing sensitive information. This experience has given me practical understanding of data classification, encryption, and compliance-oriented security design.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in secure systems and data protection can support NVISO’s mission.

Sincerely,

Md Shahanur Islam Shagor
